arthur boresi and ken chong s elasticity in engineering mechanics has been prized by many aspiring and practicing engineers as an easy to navigate guide to an area of engineering science that is fundamental to aeronautical civil and mechanical engineering and to other branches of engineering with its focus not only on elasticity theory but also on concrete applications in real engineering situations this

work is a core text in a spectrum of courses at both the undergraduate and graduate levels and a superior reference for engineering professionals book jacket

this book has been written to provide research workers with an introduction to several optical techniques for new applications it is intended to be comprehensible to people from a wide range of backgrounds no prior optical or physics knowledge has been assumed however sufficient technical details have been included to enable the reader to understand the basics of the techniques and to be able to read further from the references if necessary the book should be as useful to postgraduate students and experienced researchers as those entering the bioengineering field irrespective of whether they have a technical or clinical background it has been prepared with an awareness of the inherent difficulties in understanding aspects of optics which in the past have precluded practical application the contents address a broad range of optical measurement techniques which have been used in biomechanics techniques characterized as non-contacting and non-destructive theoretical outlines and practical advice on gaining entry to the fields of expertise are complemented by biomechanical case studies and key literature references the aim is to present each technique to appraise its advantages and capabilities and thereby to allow informed selection of an appropriate method for a particular application it is anticipated that research workers will be assisted in establishing new methodologies and gain first hand experience of the techniques

addresses behaviour of materials under extreme mechanical conditions and of failure in terms of non-linear continuum mechanics and instability theory

publishes research on energy transfer in equipment and applied thermodynamic processes in all fields of mechanical engineering and related industries topic areas include aerospace heat transfer environmental heat transfer gas turbine heat transfer heat and mass transfer in biotechnology heat transfer in electronic equipment heat transfer in energy systems heat transfer in fire and combustion systems and heat transfer in manufacturing and materials processing

vol for 1961 includes the proceedings of the 7th midwestern conference on fluid mechanics and the proceedings of the 5th midwestern conference on solid mechanics both previously published separately
